## EDITORIAL REVIEW OF THE VITAL STATISTICS OF MASSACHUSETTS: 1925.

### PART I. MORTALITY STATISTICS.

	PAGE
INTRODUCTION . . . . .	3-11
General mortality . . . . .	3-6
Death registration . . . . .	3
Purpose . . . . .	3
Mortality statistics . . . . .	3, 4
Source of data . . . . .	4
Death rates and their comparability . . . . .	4
Number of deaths and death rates . . . . .	4, 5
Sex . . . . .	5
Age . . . . .	5
Sex and age . . . . .	5
Marital condition . . . . .	5
Centenarians . . . . .	5
Nativity . . . . .	5
Seasonable distribution of deaths . . . . .	5, 6
Infant mortality . . . . .	6, 7
Causes of death . . . . .	7-9
Sources of error in mortality statistics . . . . .	7
Principal causes of death . . . . .	7-9
Deaths investigated by medical examiners . . . . .	9-11
Source of data . . . . .	9, 10
Number of deaths investigated . . . . .	10
Autopsies . . . . .	10
Cause of death . . . . .	10, 11
STATISTICAL TABLES . . . . .	12-115
General mortality . . . . .	12-87
TABLE 1.—Deaths, by sex and nativity, population, and death rates in each county and city: 1925 . . . . .	12-17
TABLE 2.—Deaths, by sex and age, in each county: 1925 . . . . .	18, 19
TABLE 3.—Deaths, by sex and age, in municipalities having over 10,000 inhabitants in 1925: 1925 . . . . .	20-25
TABLE 4.—Population, deaths, and death rates per 1,000 population: 1900 to 1925 . . . . .	26
TABLE 5.—Mortality of males and females: 1900 to 1925 . . . . .	26
TABLE 6.—Deaths at specified ages: census years 1900 to 1925 . . . . .	27
TABLE 7.—Per cent of deaths at specified ages—both sexes: 1900 to 1925 . . . . .	27
TABLE 8.—Male deaths per 1,000 female deaths at specified ages: 1922 to 1925 . . . . .	27
TABLE 9.—Deaths of males and females at specified ages: 1916 to 1925 . . . . .	28
TABLE 10.—Deaths of persons 100 years of age and over, by age, sex, place of death, place of birth, marital condition, date of death and name of decedent: 1925 . . . . .	29
TABLE 11.—Deaths of persons 100 years of age and over, by sex, nativity, marital condition, and age of oldest decedent: 1900 to 1925 . . . . .	29
TABLE 12.—Deaths by sex, age, and marital condition: 1925 . . . . .	30
TABLE 13.—Deaths in counties, and in cities having over 50,000 inhabitants, in 1925, by months: 1925 . . . . .	31
TABLE 14.—Deaths from each cause and class of causes, according to the detailed International List, by months and sex and by age and sex: 1925 . . . . .	32-57
TABLE 15.—Deaths from important causes in each municipality: 1925 . . . . .	58-82
TABLE 16.—Deaths from important causes: 1900 to 1925 . . . . .	83
TABLE 17.—Deaths, death rates per 100,000 population, and per cent distribution by each cause and class of causes according to the abridged International List: 1919 to 1925 . . . . .	84, 85
TABLE 18.—Death rates per 100,000 population based on annual average number of deaths for the five-year period of which the census year is the median year: census years 1900 to 1920 . . . . .	86
TABLE 19.—Deaths produced by external causes: 1902 to 1925 . . . . .	86
TABLE 20.—Deaths from cancer, by sex, age, and marital condition: 1925 . . . . .	87
Infant mortality . . . . .	88-109
TABLE 21.—Deaths under 1 month of age; also under 1 year of age, by sex, in the State and each municipality: 1925 . . . . .	88-90
TABLE 22.—Live births, deaths under 1 year, infant mortality rates, and per cent of deaths under 1 year to deaths at all ages: 1900 to 1925 . . . . .	90
TABLE 23.—Infant deaths per 1,000 live births in municipalities having over 15,000 inhabitants in 1925: 1918 to 1925 . . . . .	91
TABLE 24.—Birth rates, death rates, natural increase, infant mortality rates, and survivorship in municipalities having over 15,000 inhabitants in 1925: 1925 . . . . .	91, 92
TABLE 25.—Infant mortality in Massachusetts, Boston, and the remainder of the State outside Boston: 1910 to 1925 . . . . .	92

## LETTER OF SUBMITTAL.

---

THE COMMONWEALTH OF MASSACHUSETTS,  
OFFICE OF THE SECRETARY,  
DIVISION OF VITAL STATISTICS, BOSTON, April 28, 1926.

*To the Honorable Senate and House of Representatives.*

I have the honor to submit herewith, as required by chapter 46, section 21 and chapter 208, section 47 of the General Laws, the eighty-fourth annual report on statistics of births, marriages, divorces, and deaths in Massachusetts, for the calendar year 1925 in two parts: Part I, Mortality Statistics; Part II, Statistics of Births, Marriages, and Divorces. The fact that deaths are reported monthly, while births, marriages, and statistics of divorce are not reportable until the year following that in which the events occur, makes possible the availability of the mortality report earlier than the report of births, marriages, and divorces. Hence the presentation in two parts in one volume.

The editorial review and the method of presentation of the statistical data were prepared by Edgar A. Bowers, State Registrar, in charge of the Division of Vital Statistics. The statistical tables were prepared under the direction of Agnes E. Kimball, chief clerk of the division. The exhibition of tabular results is restricted to such as are plainly of practical utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

FREDERIC W. COOK,  
*Secretary of the Commonwealth.*

## INTRODUCTION.

### *History.*

**Death Registration.** — There has been a registration law in Massachusetts since 1639. By Chapter 3 of the Acts of 1639 of the laws of the Colony and Province of Massachusetts Bay the registration of births, marriages and deaths was required. In 1880 the registration area for deaths recognized by the United States Bureau of the Census, i.e., the States, and cities in other States, effectively enforcing satisfactory registration laws of all deaths registered, included but two States, Massachusetts and New Jersey, the District of Columbia, and a number of cities in non-registration States.

During the period 1841 to 1925, inclusive, 3,092,892 deaths have been reported, recorded, and tabulated in the Division of Vital Statistics.

These records are not only on file in the cities and towns in which they occurred, and in the city and town given as the residence of the deceased at the time of death, but also at the State House.

**Purpose.** — Death registration often gives the first intimation of pestilential disease, permitting health officers to attack epidemics in their incipency. It serves as evidence in the inheritance of property and in the settlement of life insurance. It is useful in preventing crime through the restriction placed upon the disposal of dead human bodies, and insures a permanent and uniform record of the death of each individual for both sentimental and legal reasons.

**Mortality Statistics.** — Mortality statistics, or statistics of deaths, are useful in showing the extent and rate of change in population produced by deaths, the average duration of life, the relative frequency with which the several causes produce death, and for their service in creating an interest in public health

administration and securing support for sanitary measures. In comparison with birth statistics they give useful information regarding population increase or decrease. Mortality statistics, however, cannot be used as an index of the prevalence of certain diseases, because there is no fixed ratio between sickness and fatality. Only cases of fatal sickness or disease are given, while morbidity statistics include all cases, whether fatal or not.

**Source of Data.** — Mortality statistics are based upon original data obtained by the registration of deaths, which is accomplished by the use of a blank or schedule known as the standard death certificate.

The responsibility for seeing that a certificate is properly made out and filed with the local board of health rests primarily with the undertaker, who is required by law to present a satisfactory certificate of death before he may obtain a permit to remove the body from the city or town in which the death occurred, or to bury the body. The local board of health is required to transmit the death certificate to the city or town clerk, who in turn records the death and transmits a certified copy to the Secretary of the Commonwealth on or before the tenth day of the month following that in which the death occurred. Hospitals and other institutions are required to obtain, when a person is received, the facts which would be required for record in the event of the death of such person.

**Death Rates and Their Comparability.** — The death rates given in this report are based upon the comparison of total deaths with the aggregate population. They are usually expressed in terms of the number of deaths per 1,000 population, and are calculated by dividing the total number of deaths by the population in thousands. This means that death rates vary with the character of the population and each element has its relation to the rate of mortality, and therefore, for comparison with other States or countries, the make-up of the population must be considered. The death rate per 1,000 males is generally higher than the rate per 1,000 females. Hence, a State having a relatively larger female population than another will normally show a lower death rate, and a community where the very young or old predominate will show a higher rate than a community made up largely of young adults. Rates will also vary with the color and nationality of the inhabitants.

Factors which seriously affect the comparability of the death rates of different communities are: (1) race composition; (2) the social, marital, and economic status of the people; (3) employment; (4) the location of hospitals and institutions; (5) migration; and (6) the birth rate.

The rates given in this report, as well as those in all the preceding registration reports, are based on the inclusion of all deaths, both resident and non-resident, occurring in each city or town. Deaths in the asylums for the insane and in other State institutions are enumerated with those of the town where they are located, and while for certain localities nonresident deaths are given (see footnote, page 12), no plan has yet been devised for charging nonresidents back to the towns from which they come. The popularity of city hospitals also affects local statistics. Many victims of diseases, contracted in the country, are carried to the city hospitals and some die there. This requires their deaths to be recorded in the city where they die. Obviously, this is an injustice which is especially apparent in some instances.

In addition to the erroneous and unwarranted conclusions sometimes arrived at by attempting to compare data which are not comparable, such as death rates of different communities of varying sex and age composition, another possible source of error in mortality statistics is the original data, which are sometimes given by persons not fully cognizant of the true facts.

**Number of Deaths and Death Rates.** — There was an increase in the mortality of 1925 as compared with that of 1924, the number of deaths occurring during the calendar year 1925 being 51,890, an increase, as compared with 1924, of 2,424. Based on the State census of 1925 of 4,144,205 population these deaths correspond to a rate of 12.5 per 1,000 population, as compared with 12.4 in 1924. The rate for 1921, 12.3, is the lowest ever recorded in Massachusetts.

During the ten-year periods, from 1900 to 1909, inclusive, the average death rate of the Commonwealth was 16.6, and 1910 to 1919, inclusive, 15.4.

This remarkable decrease in mortality has been the rule rather than the excep-

tion in the experiences of the other states. Since 1900 the average death rate for Massachusetts has been 15.3 per 1,000 living. During the period 1871 to 1875 this rate stood at 20.7 and as recently as the period 1896 to 1900, at 18.1, while the decade from 1910-1919 shows an average rate of 15.4, a decided decrease.

Table 4, on page 26, shows the number of deaths and the death rates per 1,000 population for the census years and per 1,000 estimated population for the intercensal years from 1900 to 1925.

**Sex.** — Of the 51,890 deaths in 1925, 26,457, or 51 per cent, were males, as compared with 51.3 per cent in 1924. The proportion of males in the living population, as shown by the United States Census of 1920, was 49.1 per cent. Expressed as a ratio there were 1,040 deaths of males per 1,000 deaths of females in 1925, as compared with 1,055 in 1924, 1,006 in 1923, 1,010 in 1922, 1,005 in 1921, and 986 in 1920.

Table 5, on page 26, shows that the death rate for males has been consistently greater than the death rate for females. The death rate of the sexes has fluctuated considerably, reaching the maximum in 1918, when the difference was 3 per 1,000.

**Age.** — Of the 51,890 deaths in 1925, 6,294, or 12.1 per cent, were of infants under 1 year of age, as compared with 12.5 per cent in 1924, and an average of 14 for the five years from 1920 to 1924, 15.9 for the five years from 1915 to 1919 and 19.6 for the five years from 1910 to 1914. A more detailed discussion of infant mortality may be found on pages 6 and 7.

**Sex and Age.** — The death rate of adult males might be expected to exceed the rate of adult females, on account of the more dangerous occupations of the males, but the excess in the death rate of male infants as compared with female infants has never been satisfactorily explained. Of the 6,294 decedents under 1 year of age in 1925, 3,637, or 57.8 per cent, were males. The ratio of male to female deaths among the higher age periods fluctuated somewhat. The proportion of male deaths was the larger from 1 year of age up to and including the age period 65 to 69 years, with the exception of the 20 to 24, 25 to 29, and 30 to 34 year age periods, in which the number of female deaths was larger than the number of male deaths. From the age of 70 years and upward the number of deaths of females exceeded the deaths of males. The ratios of male deaths per 1,000 deaths of females at the various age periods in the four years 1922 to 1925 are shown in Table 8, on page 27.

The excess of females in the population 65 years of age and over is so great that, even though their mortality at each age period is below that of males, the absolute number of deaths is greater. Among the 26,457 male decedents in 1925, 3,637, or 13.7 per cent, were under 1 year of age; among the 25,433 female decedents, 2,657, or 10.4 per cent, were under 1 year; and among the decedents of both sexes 12.1 per cent were under 1 year (see Table 9, page 28).

**Marital Condition.** — Not quite one half (47.7 per cent) of the decedents 15 years of age and over, whose marital condition was reported in 1925, were married, 19.9 per cent were single, 31.1 per cent were widowed, 1 per cent was divorced, and .3 per cent was unknown. Among the male decedents 55.7 per cent were married, 20.9 per cent were single, 21.7 per cent were widowed, 1.2 per cent were divorced, and .5 per cent was unknown. Among the female decedents 39.9 per cent were married, 18.9 per cent were single, 40.3 per cent were widowed, .8 per cent was divorced, and .1 per cent was unknown. No precise study of the bearing of marital condition on mortality statistics can be made, however, without a detailed statement of the age distribution of the population. The age groups used in the census statistics do not coincide with the age groups used in the tabulation of death statistics, so that the two sets of figures cannot be used together. Table 12, on page 30, shows the number of deaths of males and females 15 years of age and over, by marital condition.

**Centenarians.** — Among the deaths registered during 1925 there were 22 of reputed centenarians, 16 of whom were females, 11 were native, 10 were foreign born and 1 whose birthplace was unknown; 20 were widowed, 1 was married, and 1 was single. Table 11, on page 29, presents data concerning the deaths of centenarians by sex, nativity, marital condition, and maximum age at death for the twenty-six years 1900 to 1925.

**Nativity.** — Over two thirds (65.1 per cent) of the decedents whose nativity was reported on the death certificates in 1925 were native, and 34.5 per cent were foreign. There was .4 per cent whose nativity was not reported.

**Seasonal Distribution of Deaths.** — The largest number of deaths during any month occurred in March (5,284), and the next largest number in April (4,840). Since the months are not of equal length, the monthly incidence must be reduced to a uniform basis. The average daily number of deaths for 1925 was 142. The months showing a higher average than that for the year were March (170), February (165), April (161), January (156), December (152), and May (145). Table 13, on page 31, shows the number of deaths in each month of 1925 in the State, in counties, and in cities having over 50,000 inhabitants in 1925.

#### *Infant Mortality.*

The infant mortality for the State in 1925 was 73.1 per 1,000 live births as compared with 67.7 in 1924. The rate for 1924 (67.7) was the lowest ever recorded in the Commonwealth. Reference to Table 22, on page 90, shows in striking manner the remarkable reduction in infant mortality, actual decrements without regard for increase in the number of births and without regard for increase in population.

The greatest infant mortality occurred in 1896 (11,765 deaths); and the next greatest actual number of infant deaths occurred twelve years later, 1908 (11,606).

The figures from 1908 to 1925 are shown in the following table:

YEARS.	Number of deaths under one year of age.	Infant mortality rates.
1908 . . . . .	11,606	133.5
1909 . . . . .	10,693	127.2
1910 . . . . .	11,499	132.9
1911 . . . . .	10,543	119.4
1912 . . . . .	10,472	116.5
1913 . . . . .	10,086	110.1
1914 . . . . .	9,894	105.9
1915 . . . . .	9,490	101.9
1916 . . . . .	9,334	99.8
1917 . . . . .	9,325	97.4
1918 . . . . .	10,820	113.2
1919 . . . . .	7,769	88.5
1920 . . . . .	8,382	91.2
1921 . . . . .	7,005	75.9
1922 . . . . .	7,129	81.3
1923 . . . . .	6,968	78.1
1924 . . . . .	6,191	67.7
1925 . . . . .	6,294	73.1

In the ten years from 1916 to 1925 there has been a *decrease of 8 per cent in the number of live births registered, and in the actual number of deaths under one year of 32.6 per cent.* In 1925 deaths in Boston under 1 year of age numbered 1,585, or 85.1 per 1,000 live births, as compared with 74.2 in 1924, 82.4 in 1923, 92.3 in 1922, 77.2 in 1921, and 100.2 in 1920. In the ten years from 1916 to 1925, there has been a decrease of 4.9 per cent in the number of live births registered, and a decrease in the actual number of deaths under 1 year of 22.5 per cent. For the remainder of the State the number of births registered decreased 8.8 per cent during this period, while the number of deaths under 1 year decreased 35.4 per cent. The infant mortality rates for the State, exclusive of Boston, decreased from 134.3 in 1910, to 69.9 in 1925, as compared with a decrease in Boston from 127.4 in 1910 to 85.1 in 1925. (See Table 25 on page 92.)

Deaths under one month and also under one year of age in each municipality are shown in Table 21 on pages 88 to 90.

The infant mortality rates in municipalities having 15,000 or more inhabitants in 1925 are shown for the years 1918 to 1925 in Table 23 on page 91.

A careful analysis of the returns of cities and towns in which children's hospitals are located would probably show lower infant mortality rates than appear in Table 23.

The highest proportion of deaths occurs in the early period of infancy and especially is this true of the first few days. In 1925, 2,558 deaths occurred in the first week, constituting 40.6 per cent of all deaths under 1 year of age. On the first day the percentage of deaths (20.5) was higher than on any other day. In

Massachusetts  
Infant Deaths per Thousand  
Live Births 1900 - 1925

per Thousand Live Births

the first month of life there were 3,365 deaths, or 53.5 per cent of all infant deaths. In the first three months there were 4,226 deaths, or 67.1 per cent of all infant deaths. Over three fourths (80.3 per cent) of the infant deaths occurred in the first half of the year.

Over three fourths (80.6 per cent) of the 2,558 babies who died less than one week after birth died of prematurity, congenital debility, malformations, or injuries received at birth. Of the 2,864 babies who died from these causes before reaching the age of 1 year, 37.6 per cent died in less than one day, 72 per cent died in less than one week, and 86.7 per cent died in less than one month. The second most important cause of infant deaths — gastric and intestinal diseases — claimed 628, or 10 per cent of the babies who died before reaching 1 year of age. Thirteen and four-tenths per cent of the babies who died from this cause died in less than one month after birth, 14.6 per cent within one but less than two months after birth, and 14.2 per cent within two but less than three months after birth.

The largest number of deaths of infants is due to developmental and wasting diseases,\* and the figures indicate a reduction in infant mortality due to these causes, — from 35 deaths per 1,000 live births in 1918, to 28.1 in 1925. Respiratory diseases also caused a considerable number of deaths. The number of deaths from bronchopneumonia\* has changed but little since 1918, when there were 1,221 infant deaths from this cause; 1,114 in 1920; 752 in 1921; 1,039 in 1922; 1,040 in 1923, 770 in 1924; and 906 in 1925. The principal causes of infant deaths for the year 1918 to 1925 are shown in Table 27 on page 93.

### *Causes of Death.<sup>1</sup>*

**Sources of Error in Mortality Statistics.** — The chief element of error in mortality statistics lies in the inaccuracy of the statement of the cause of death as reported by the attending physician, who may not have been in a position to feel reasonably certain as to the nature of the terminal illness. Statements of cause of death are often incomplete as a result of the unintentional failure of the physician to state all the morbid conditions known to him which resulted in the death. It is also probable that there are many unavoidable errors of mistaken diagnosis.

It should also be borne in mind that the process of classifying the thousands of different terms — some of them of a very indefinite or unsatisfactory character — under the 205 titles of the International List of Causes of Death present many difficulties which are seldom fully appreciated by those who have not engaged in the work of classification. Even if each certificate of death out of the 51,890 received during 1925 at the Division of Vital Statistics of the office of the Secretary of the Commonwealth bore only a single cause, the process would present many difficulties. Many certificates, however, bear statement of two or more causes instead of one and a system of selection, according to the precedents and rules of the International Committee, has been adopted by the United States Bureau of the Census, and is used in the Division of Vital Statistics. Because of the complications attendant upon any attempt to show all primary and secondary terms in relation, it becomes necessary to base all statistical compilations of causes of death on the selection of a preferred term. As a result it is evident that there may be a margin of error, because in a considerable number of certificates only one of the contributory causes may be shown. Each definite cause of death as compiled, therefore, represents a minimum number, which would be increased if deaths from such causes that were not properly reported, and hence were classified under various ill-defined titles, could be included.

**Principal Causes of Death.** — Nearly one-third of the 51,890 deaths reported in 1925 were caused by organic heart disease\* (including pericarditis), pneumonia (including bronchopneumonia), and tuberculosis in all forms. These diseases, together with apoplexy,\* cancer, Bright's disease\* and nephritis, external causes, malformations\* and the diseases of early infancy, caused 72 per cent of the deaths for the year.

**Pneumonia** (including bronchopneumonia) caused 5,244 deaths in 1925 or 126.5 per 100,000 population. It was responsible for 4,362 deaths, or 109 per 100,000

<sup>1</sup> In this report an asterisk (\*) has been used in the text to denote those certified causes of death which the committee, after careful consideration, reported were acceptable statements of causes of death without autopsy.

population in 1924 as compared with 147 in 1923, 139.6 in 1922, 108.1 in 1921, and 164.8 in 1920. The deaths from *heart disease*\* (organic diseases of the heart\* and endocarditis\*) in 1925 numbered 8,894, or 17.1 per cent of all deaths, or 214.6 per 100,000 population, as compared with 8,032, or 16.2 per cent of all deaths, or 200.6 per 100,000 population in 1924. In 1918 deaths from this cause increased 10.5 per cent over 1917, while the death rate per 100,000 population increased to 205.4 for 1917, or 8.5 per cent over the rate of 189.4 in 1916, and 53.6 per cent over the average rate (133.7) for the five years from 1911 to 1915.

**Tuberculosis** in its various forms claimed 3,459 victims in 1925, of whom 2,883 died from tuberculosis of the respiratory system.\* Deaths due to the latter cause constituted 5.6 per cent of all deaths during the year, as compared with 8.1 per cent for the five years 1912 to 1916. In the six years from 1910 to 1915 the death rate from tuberculosis of the respiratory system\* fell from 133.2 to 116 per 100,000 population, a drop of 17.2 per cent, the decline being continuous from year to year. In 1918, however, there was an increase in the death rate to 130, but in 1919 there was a decline to 108.1, 94.6 in 1920, 84.2 in 1921, 80.5 in 1922, 77.1 in 1923, 73.8 in 1924, and 69.6 in 1925.

**Apoplexy**\* was the cause of 4,893 deaths, or 118.1 per 100,000 population. The death rate from this disease has fluctuated somewhat from 103.9 in 1917, 108.4 in 1920, 109.7 in 1921, 116.7 in 1922, 118 in 1923, and 117.7 in 1924.

**Cancer and other malignant tumors** caused 5,196 deaths in 1925 corresponding to a death rate of 125.4 as compared with 126.8 in 1924. Of the deaths from cancer 32.2 per cent resulted from cancers of the stomach and liver. The death rate from cancer has risen from 89.9 in 1910 to 125.4 in 1925. The increase has been continuous. It is possible that at least a part of this increase is due to more correct diagnosis and greater care on the part of the physicians in making reports, but a part at least is due to the lengthened span of life, resulting in a larger number of people reaching the older age groups.

**Bright's disease**\* and nephritis were the causes of 3,032 deaths in 1925, corresponding to a rate of 73.2 per 100,000 population, as compared with 80.6 in 1924, 84.3 in 1923, and an average rate of 90.2 for the five years from 1918 to 1922. There were 2,883 deaths caused by Bright's disease,\* and 149 by acute nephritis.

**Congenital debility\* and malformations\*** caused 2,470 deaths in 1925, corresponding to a rate of 59.6 per 100,000 population. The death rates from these causes have shown a steady decline from 109.2 in 1910 (with the exception of 1912, 114.2).

**Diarrhea and enteritis**\* caused 840 deaths in 1925, or 20.3 per 100,000 population. With the exception of 1918 this rate has shown a marked decline. Eighty-one and four-tenths per cent of the total number of deaths charged to these causes in 1925 were of infants under 2 years of age. The rates from this cause for all ages have declined steadily from 129.3 in 1910 to 80.2 in 1915, 52.9 in 1920, 41.4 in 1921, 33.7 in 1922, 26.2 in 1923, and 24.3 in 1924.

**Diphtheria and croup**\* — which are classed together in the statistics, but practically all of which are of diphtheria — number 333, or 8 per 100,000 population in 1925, as compared with 13.3 in 1924, 14.6 in 1923, 15.4 in 1922, 15.6 in 1921, and 15.3 in 1920.

**Typhoid fever**\* has shown a steady decline since 1910, having dropped from 12.2 in that year to 1.8 in 1925. This decline is greater, relatively, than that shown for any other important cause of death. The total number of deaths due to typhoid fever in 1925 was 73, as compared with 68 in 1924, 70 in 1923, 86 in 1922, 119 in 1921, 95 in 1920, 246 in 1915, and 411 in 1910.

**Alcoholism** caused 300 deaths in 1925, an increase of 13 over those in 1924, and corresponding to a rate of 7.2 per 100,000 population. In 1923 there were 283 deaths from this cause; in 1922, 238; in 1921, 97; in 1920, 59; and in 1915, 186.

**Influenza** was responsible for 519 deaths, or 12.5 per 100,000 inhabitants, as compared with 352.7 in 1918, 74.9 in 1919, 42.1 in 1920, 3.9 in 1921, 14.5 in 1922, 18.7 in 1923, and 6.9 in 1924.

The principal epidemic maladies of childhood (*whooping cough*\*, *measles*\*, and *scarlet fever*\* — were together responsible for 723 deaths of both adults and children, or 17.4 per 100,000 population in 1925, the rates for the three diseases sepa-

Massachusetts  
Cancer Deaths, All Forms, per 100,000  
Population

rately being 6.5, 8.1, and 2.8 respectively. The mortality rates for all three of these diseases have changed greatly from year to year.

**Death rates from violence** during the past six years per 100,000 population were 76.3 in 1920, 77.1 in 1921, 79.8 in 1922, 85.5 in 1923, 86.8 in 1924, and 86.2 in 1925.

Deaths due to *railroad accidents and injuries*\* total 108 in 1925, or 2.6 per 100,000 population. The rates for previous years were 2.2 in 1924, 3 in 1923, 2.6 in 1922, 2.8 in 1921, and 4.2 in 1920.

Deaths resulting from *street car accidents and injuries*\* numbered 46 or 1.1 per 100,000 population.

**Automobile accidents and injuries**\* caused 743 deaths in 1925, or 17.9 per 100,000 population. There has been an increase in this rate from year to year until 1920 when it dropped to 11.9; 13.5 in 1921, 12.7 in 1922, 16.1 in 1923, and 17.6 in 1924. No accurate data are available for measuring the death rate per number of automobiles in use, as the statistics compiled by the Department of Public Works show the number of machines registered, and thus contain duplications, since one machine may be registered more than once in a calendar year. It is probable, however, that the increase has not been so rapid as that of the number of machines in use.

**Effects of heat** — Deaths from this cause for the year 1925 numbered 135. The nearest approach to this figure since 1900 was in 1911, when the total number of deaths from this cause was 614. The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1925 was 100 degrees on June 6. The average monthly temperature for the months of June, July and August in 1911 and 1925 was as follows:

											June.	July.	August.
1911	:	:	:	:	:	:	:	:	:	:	65.6	77.1	69.0
1925	:	:	:	:	:	:	:	:	:	:	70.9	72.4	71.2

Deaths caused by *machinery accidents*\* in 1925 numbered 48, or 1.2 per 100,000 population. The corresponding figures for previous years were 1.1 in 1920 and 1921, 1.7 in 1922, 1.6 in 1923, and 1.2 in 1924.

The number of *suicides*\* reported in 1925 was 459, or 11.1 per 100,000 population. The rates since 1920 have been: 1920, 10.1; 1921, 12.1; 1922, 11.6; 1923, 11.4, and 1924, 12.1.

Deaths caused by *firearms* numbered 177 in 1925, corresponding to a rate of 4.3 per 100,000 population. Of these deaths 100 were suicides, 51 were homicides, and 26 were accidental (including those concerning which the status as to suicide, homicide, or accident was in doubt).

Deaths from *homicide*\* numbered 108 in 1925, or 2.6 per 100,000 population. The rates for homicide in recent years are 2 in 1920, 3 in 1921, 2.6 in 1922, 2.7 in 1923 and 1924.

The causes of death of males and females for each month and at seventeen age periods for the Commonwealth for the full International List of Causes of Death with certain subdivisions are shown in Table 14, on pages 32 to 57. The causes denoted by letters, shown separately in indented type, Table 14, are a part of the total cause shown on the International List. In Table 15, on pages 58 to 82, the deaths are shown for 50 causes and groups of causes for each municipality. For the Commonwealth as a whole the deaths and death rates for the seven years 1919 to 1925 are shown for the 38 causes and groups of causes in the Abridged International List in Table 17 on pages 84 and 85. The relation of this list to the Detailed International List is shown in the Appendix. In addition to the above presentations, certain other tables showing the causes of deaths are presented on pages 86 and 87.

#### *Deaths Investigated by Medical Examiners.*

**Source of Data.** — The statistics of deaths investigated by medical examiners published in this report are based upon annual returns made by medical examiners and associate medical examiners to the Secretary of the Commonwealth of abstracts of the records of deaths supposedly due to violence, the cause and manner of which have been investigated during the year. Deaths supposedly due to violence include not only deaths caused directly or indirectly by traumatism (including resulting septicemia), and by the action of chemical (drugs and poisons),

thermal, or electrical agents, and deaths following abortion, but also deaths due from disease resulting from injury or infection related to occupation, the sudden deaths of persons not disabled by recognized disease, and those of persons found dead.

Medical examiners are often called upon to view cases in which the death was not due to violence (heart disease, apoplexy, etc.), but where the death was simply sudden or where no physician had been in recent attendance. Medical examiners are also required to certify that they have viewed bodies to be cremated, and to make personal inquiry into the cause and manner of death.

Discrepancies will be found in comparing deaths based upon certificates returned to the city and town clerks and those contained in the reports of medical examiners. The causes when certified on the death certificates are more nearly accurate, because the reports received from the medical examiners after they themselves have certified in many instances to the cause shown do not contain all of the facts that led to death. Both the reports and certificates should compare and efforts are now being directed toward a uniformity in this regard.

**Number of Deaths Investigated.** — The number of deaths investigated by the medical examiners in 1925 was 7,689, or 14.8 per cent of the total number of deaths which occurred during the year, as compared with 7,341 deaths in 1924, also 14.8 per cent of the total number of deaths. Nearly two-thirds (65.4 per cent) of these deaths were of males. Of the deaths investigated by medical examiners, 3,202, or 41.7 per cent, were reported as due to violence, while among the deaths returned to the registrars, 3,573 were reported as due to violence.

The largest number of cases investigated by medical examiners in 1925 was in Suffolk County, 2,109, as compared with 1,909 in 1924. Of the deaths investigated in Suffolk County, 922, or 43.7 per cent, were reported as due to violence. (See Table 32, pages 110 and 111.)

**Autopsies.** — Autopsies were made in 577, or 7.5 per cent of the cases investigated by the medical examiners in 1925 as compared with 8.9 per cent in 1924, 9.7 per cent in 1923, and 10 per cent in 1922.

The highest proportion of autopsies was in Suffolk County, where 16.9 per cent of the views were autopsied, as compared with 22.4 per cent in 1924. Table 34, on pages 116 and 117, shows the number of views and the number of autopsies in each county in each year from 1916 to 1925, and the number and per cent of views autopsied for the ten-year period, 1916 to 1925.

**Cause of Death.** — More than one-half (57.3 per cent) of the deaths viewed by medical examiners in 1925 were from causes not due to violence, 41.7 per cent were due to violence, and 1 per cent were stillbirths. Six hundred thirty-nine or 8.3 per cent of the views were for cremations.

Deaths from causes not due to violence numbered 4,407, of which 3,349 were from natural causes and 306 were due to alcoholism.

Deaths due to violence numbered 3,202, of which 2,631 were due to accident or negligence, 465 were suicides, and 106 were homicides.

Of the 2,631 deaths due to accident or negligence, 660 were due to falls and blows, 733 were due to automobile accidents, 268 resulted from drowning, 104 were due to railroad accidents, and 866 to other causes.

The number of deaths due to automobile accidents in the last ten years is shown in the following table:

YEARS.	Deaths from automobile accidents.	YEARS.	Deaths from automobile accidents.
1916 . . . . .	298	1921 . . . . .	506
1917 . . . . .	380	1922 . . . . .	494
1918 . . . . .	475	1923 . . . . .	619
1919 . . . . .	503	1924 . . . . .	687
1920 . . . . .	451	1925 . . . . .	733

**Suicides numbered** 465, or 14.5 per cent, of the deaths due to violence. Suicides committed with firearms (99) and by the use of illuminating and other gases (140) constituted about one-half (51.3 per cent) of the total number. The number of suicides by poisons was (37), by hanging or strangulation (90), by drowning (39) and other methods (26). About three-fourths (75.7 per cent) of the suicides were males.

Massachusetts  
Typhoid Fever Death Rate 1900 - 1925  
per 100,000 Population

Of the 465 persons committing suicide, 125 were 50 to 59 years of age, 103 were 40 to 49 years of age, 76 were 30 to 39 years of age, 44 were 20 to 29 years of age, 109 were over 60 years of age, 8 were under 20 years of age. Among the male suicides the largest numbers were from 50 to 59 years of age (100) and from 40 to 49 years (76), while among the female suicides the largest numbers were from 40 to 49 years of age (27) and from 50 to 59 years (25). The most common method of committing suicide was by illuminating or other gases.

**Homicide** numbered 106 of which 53 were by firearms, 15 were by cutting or piercing instruments, 30 by other means, and 8 were cases of infanticide. Of the 106 homicides, 73, or 68.9 per cent, were males.

<sup>1</sup> Cities are printed in small capitals.<sup>2</sup> Exclusive of stillbirths.<sup>3</sup> The rates shown in this column are based on the total population, and make no allowance for differences in the sex and age distribution of the population. The rates for certain localities are materially affected by deaths of nonresidents who may be attracted to those localities by their superior hospital facilities, or may resort to certain localities for treatment of tuberculosis, mental defects, or other diseases. The death rate, both including and excluding nonresidents, is shown.<sup>4</sup> 58 nonresidents.<sup>5</sup> 54 nonresidents.<sup>6</sup> 2,041 nonresidents.<sup>7</sup> 148 nonresidents.<sup>8</sup> 115 nonresidents.<sup>9</sup> 137 nonresidents.

<sup>1</sup> Balance between.

<sup>2</sup> Not tabulated.

<sup>3</sup> Deaths from heat for the year 1925 numbered 135. This is the nearest approach to the high mark since 1911 when the total number of deaths from this cause was 614.

The highest temperature recorded at the Weather Bureau of the United States Department of Agriculture since 1900 was 104 degrees on July 4, 1911. The highest temperature recorded in 1925 was 100 degrees on June 6.

The average monthly temperature for the months of June, July, and August, in 1911 and 1925 was as follows:

1911 . . .	June.	July.	August.
1925 . . .	65.6	77.1	69.0
	70.9	72.4	71.2

INTRODUCTION.

**Birth Registration.** — Like the registration of deaths, birth registration has been compulsory in Massachusetts since Colonial times. It was one of the first States to be included in the registration area of the United States Census Bureau. The making of authentic birth records presents greater difficulties than that of either marriages or deaths, and probably no State or sizable city claims 100 per cent birth registration; but the results in Massachusetts on the whole are considered to be far above the average and efforts are continually being made for its improvement.

Records are made in the first instance by the local registrars, who are the city and town clerks, with the exception of Boston where the City Registrar is the official in charge.

The physician\* in attendance at the birth of a child is required, within forty-eight hours, to give notice and make a complete return within fifteen days of the facts required for record to the clerk of the city or town in which such birth occurred. Parents, within forty days, are required to give notice to the registration official of every child born to them.

In addition to the above, persons in charge of a hospital, almshouse, or other institution, public or private, are required to give, on or before the fifth day of each month, notice to the town clerk of every birth occurring among the persons in such institution during the preceding month. The law also requires the clerk of each town annually in January to ascertain the facts required for record of all children born in his town during the preceding year and resident therein.

The records on file in the Division of Vital Statistics are attested copies of the originals filed with the local officials. The law has required the filing at this central record office from 1841. During this time 4,619,452 births have been registered and the annual registration report issued. Since the establishment of the office of the State Registrar of Vital Statistics in 1918, a systematic campaign has been carried on to obtain prompt and complete compliance with the birth registration laws. If people generally realized the importance of birth records, complete registration would soon be an accomplished fact.

There is hardly a relation of life, social, legal, or economic, in which the evidence furnished by an accurate registration of births may not prove to be of the greatest value, not only to the individual, but also to the public at large. It is not only an act of civilization to register Birth Certificates, but also good business, for they are frequently used in many practical ways:

1. As evidence to prove the age and legitimacy of heirs;
2. As proof of age to determine the validity of a contract entered into by an alleged minor;
3. As evidence to establish age and proof of citizenship and descent; in order to vote;
4. As evidence to establish the right of admission to the professions and to many public offices;
5. As evidence to legal age to marry;
6. As evidence to prove the claims of widows and orphans under the Widows and Orphans Pension Law;

\* Midwives are not recognized in Massachusetts. It has been held that the practice of midwifery is the practice of medicine, and as there is no provision under the law for licensing midwives, any one who practices midwifery is violating the medical registration laws.

7. As evidence to determine the liability of parents for the debts of a minor;
8. As evidence in the administration of estates, the settlement of insurance and pensions;
9. As evidence to prove the irresponsibility of children under years of age for crime and misdemeanor, and various other matters in the criminal code;
10. As evidence in the enforcement of laws relating to education and to child labor;
11. As evidence to determine the relations of guardians and wards;
12. As proof of citizenship in order to obtain a passport;
13. As evidence in the claim for exemption from or the right to jury and militia service.

Copies of records of births occurring during the preceding year are forwarded to the Division of Vital Statistics on or before March 1st, April 1st and May 1st of the year following; the time depending upon the size of the city or town making the return.

After the statutory period has elapsed for filing copies of the records with the Department of the Secretary of the Commonwealth, no delayed returns or corrections can be accepted unless supported by a deposition made by the parents, physician, or based upon a writing made at the time by a person since deceased charged with making the return in the first instance. As the evidential value of a record depends for its authenticity upon the fact that it is made contemporaneously with the happening of the event recorded, the registrars are urged to exercise considerable care in accepting delayed returns for records, particularly if it is some years after the birth occurred. This holds true of corrections which can only be made in accordance with the facts as they actually existed at the time the birth occurred, with the exception of an illegitimate child who is legitimized through the subsequent marriage of its parents; in these cases the record may be corrected in accordance with Chapter 281 of the Acts of 1925, so that the child will appear on the record as the legitimate offspring of its parents.

The annual canvass is an important factor in eliminating errors from physicians' returns of births, and many local registrars in Massachusetts are guarding against such errors by sending an exact copy of the physician's return to the parents for their approval; and when the certificate is returned properly signed by a parent, it is filed with the physician's certificate. Many cities and towns have already adopted this follow-up system, and an attempt is being made to institute this method throughout Massachusetts.

**Live Births.** — In the Commonwealth in 1925 there were 86,014 live births, a decrease of 5,449, or 6 per cent, as compared with the number registered in 1924. There was a decrease in 1925 of 1,488, or 3.5 per cent, in the number of infants born to native parents; 3,412, or 10.5 per cent, to foreign-born parents; 541, or 3.2 per cent, to mixed parents, namely, one parent native, the other foreign-born, as compared with 1924.

**Birth Rate.** — In proportion to the total population, the total live births were equivalent to a rate of 20.8 per 1,000 population. This was .2 per 1,000 lower than that recorded in 1924, and 2.2 per 1,000 below the average for the five years 1920 to 1924.

**Changes in Birth Rate.** — The birth rate for the Commonwealth attained the highest point on record, 30.2 in the year 1857. Since then the rate, although fluctuating considerably, has shown a considerable decline, notwithstanding an improvement in the registration. Although the birth rate has been smaller in recent years, the infant death rate has also declined, so that the number of babies who survive the dangers of infancy is becoming steadily greater. This fact is strikingly shown in the infant mortality tables.

**Stillbirths.** — Stillbirths registered in 1925 number 3,141, a decrease of 447, or 11.5 per cent, as compared with 1924. The rate per 1,000 live births was 36.5 in 1925, 38.8 in 1924, 37.3 in 1923 and 1922, 37.2 in 1921, and 36.3 in 1920.

**Birth Rates, Principal Cities.** — The six municipalities having 25,000 inhabitants or more showing the highest birth rates in 1925 are: Framingham, 29.1; Attleboro, 26.9; Woburn, 25.9; Fall River, 25.8; New Bedford, 25.2 and Fitchburg, 24.9.

The city of Fall River has the largest birth rate (25.8) of any place in the State

of over 100,000 population. High birth rates, however, do not necessarily indicate satisfactory increases in population, since high rates of infant and childhood mortality may nullify the effect of high birth rates.

Variations in the birth rates of different communities may be partially accounted for by differences in the proportions of married women of child-bearing age residing therein, and by the presence of hospitals to which expectant mothers go from neighboring cities and towns in order to take advantage of the best medical advice and obstetrical care during pregnancy and childbirth.

**Sex Proportion at Birth.** — It has never been determined whether the higher proportion of masculine than of feminine births is the result of definite causes or not. The fact remains that this phenomenon is invariably true. Births of males in 1925 numbered 44,082, and those of females 41,930, corresponding to a ratio of 1,051 male births to 1,000 female births.

**Nativity of Parents.** — The number of births where both parents were native (40,905) exceeded the number of births where both parents were foreign-born (28,968) by 11,937, or 41.2 per cent in 1925. Children born of mixed parents (one parent native and one parent foreign-born) numbered 16,112 in 1925, as compared with 16,653 in 1924.

The proportion of children born of native parents declined from 1890 until about 1910, since when the proportion has steadily increased. In 1925 the proportion was 47.6 per cent.

The proportion of children born of parents one of whom was native and the other foreign-born was 18.7 in 1925, as compared with 18.2 in 1924. The number of children born of parents whose nativity was not reported on the birth certificate was 8 in 1925.

**Plural Births.** — In 1925 there were 886 plural births, 869 pairs of twins and 17 cases of triplets, or 10.1 pairs of twins per 1,000 live births, and .2 cases of triplets per 1,000 live births.

**Natural Increase.** — The excess of the birth rate over the death rate shows the ratio at which the community is reproducing itself by natural increases. In every year since the compilation of birth statistics was started the birth rate has been higher than the death rate.

The rate of natural increase for 1925 was 8.3 per 1,000 population, and averaged 10.1 for the five years 1910 to 1924.

Notwithstanding the decline in the birth rate in recent years, the number of births is greatly in excess of the number of deaths; and this fact, coupled with the steady decrease in infant mortality, has resulted in a net gain in the natural increase in population. The excess of births over deaths amounts to 65.8 per cent in 1925, as compared with 84.9 in 1924, 70.3 in 1923, 71.4 in 1922, 93 in 1921, and 71.3 in 1920.

For comparisons previous to 1900 relative to the natural increase from 1851, and for figures from that date up to and including 1919, reference may be made to the Annual Report of Vital Statistics of Massachusetts for the year ending Dec. 31, 1919, Public Document No. 1.

#### INTRODUCTION.

**Marriage Registration.** — As in the case of births and deaths the public registration of marriages has been required for many years in Massachusetts. Records of marriage are made in the first instance in the cities and towns of the State where the contracting parties dwell and where the ceremony is performed.

Since 1841 it has been required that copies of these records be forwarded annually to the Secretary of the Commonwealth and from 1841 to 1925, inclusive, there have been 4,642,800 marriages reported, recorded and tabulated in this department.

**Accuracy.** — The registration of marriages presents fewer difficulties than the registration of birth and death records and the statistics should be nearly 100 per cent perfect.

**Source of Data.** — The marriage statistics in this report are compiled from attested copies of the records of marriages recorded in every city and town. Persons intending to be joined in marriage in Massachusetts must file a notice of intention in the town in which they respectively dwell, and this notice of intention must contain the facts required for record and be sworn to by one of the parties to the marriage. If a marriage is performed in a town other than the town issuing the license, a copy of the license or licenses must be made and forwarded by the clergyman or magistrate to the clerk of the municipality in which the ceremony was performed. Five days after the notice of intention is filed the marriage license is issued with all the facts set forth in the notice of intention which are required for record. This certificate is presented to the clergyman or magistrate before whom the marriage is performed, and the facts as to the ceremony are certified by that person. Between the first and tenth days of the month following the ceremony the license or licenses must be returned to the office or offices issuing the same.

Marriages may be performed by a minister of the gospel, ordained according to the usage of his denomination, who resides in the Commonwealth and continues to perform the functions of his office; by a rabbi of the Israelitish faith, duly licensed by a congregation of said faith established in the Commonwealth, who has filed with the clerk or registrar of the town where he resides a certificate of the establishment of the synagogue, the date of his appointment thereto, and of the term of his engagement; by a justice of the peace if he is also clerk or assistant clerk of a town, or a registrar or assistant registrar, in the town where he holds such office, or if he is also clerk or assistant clerk of a court, in the city or town where the court is authorized to be held, or if he has been designated as a justice of the peace; and it may be solemnized among Friends or Quakers according to the usage of their societies; and a specified marriage may be performed by a non-resident clergyman commissioned by the Governor in accordance with the provisions of Chap. 102 of the Acts of 1926; but no person shall solemnize a marriage in the Commonwealth unless he can read and write the English language.

The principal source of error in the records of marriage comes about through the carelessness or ignorance of one of the parties in filing the notice of intention as to the facts concerning the other party. Therefore, it sometimes happens that records for the same marriage coming from different towns do not contain the same information. Names and other facts will be at variance. These certificates are compared in the Division of Vital Statistics and every effort is made to have the certificates agree, but considerable confusion and delay follow from this situation.

**Purpose.** — The practical purposes of marriage records are:

1. As evidence to establish dower and curtesy rights of husband and wife.
2. To prove legality as to claims of inheritance.

3. As evidence upon which to base subsequent records concerning the parties.
4. For Governmental pension purposes.
5. For pensions under Employees Pension Laws.
6. For insurance, pension and retirement purposes.
7. To establish legal settlement for public aid and the settlement of dependent children of parents.
8. For naturalization and passport purposes.
9. To prove legitimacy of children.

Every precaution has been taken to see that all the statutes pertaining to the solemnization of marriage are strictly enforced, but because there is no public registration of ministers of the gospel required in Massachusetts, it is not always possible to get in touch with the persons responsible for making returns of marriages solemnized by them. To guard against the possibility of marriages being performed on one license where two are required, on an out-of-state license, or on a license that has become invalid because of lapse of time, a circular setting forth the requirements before and after solemnizing a marriage has been prepared, together with copy of the marriage laws and these are forwarded, upon request, to all persons interested, and are sent to the city and town clerks together with posters setting forth the legal impediments to marriage which are posted in their offices.

The errors in solemnizing and returning a record of marriage, if any, are due to the lack of information as to the requirements of the statute rather than to any wilful attempt to evade the requirements of the law.

A marriage license is valid throughout the Commonwealth, regardless of the residence of either party and many marriages are performed in cities and towns other than the place where either party lived. Persons who do not reside in the Commonwealth must file their intention with the clerk of the city or town where they propose to have the marriage solemnized.

The following tables contain the number of marriages solemnized:

INTRODUCTION.

**Causes for Divorce.** — Causes for which divorce from the bonds of matrimony may be granted in Massachusetts under the provisions of chapter 208, Sections 1 and 2 of the General Laws, are as follows: —

- 1. Adultery.
- 2. Impotency.
- 3. Desertion for three consecutive years next prior to the filing of the libel.
- 4. Gross and confirmed habits of intoxication caused by the voluntary and excessive use of intoxicating liquor, opium or other drugs.
- 5. Cruel and abusive treatment.
- 6. Neglect to provide.
- 7. Sentence to imprisonment at hard labor for five years or more.

A marriage may be declared void in consequence of violation of the provisions of the laws concerning marriage; that is, a separation may be granted because of the demonstration of conditions obtaining at the time of, or previous to, the alleged marriage, which show that there never was a legal marriage.

**Source of Data.** — The statistics of divorce presented in this report are compiled from returns made to the Secretary of the Commonwealth annually by the clerks of courts and registers of probate for the several counties.

In Massachusetts there is no central record office for divorces, the statistics only being returned as stated above. The records remain with the clerks or registers.

Previous to 1922 the superior court only had jurisdiction in such matters, and the filing of returns was in compliance with chapter 208, Sections 46 and 47 of the General Laws. By the provisions of chapter 465 of the Acts of 1921, it was provided in Section 2 that any divorce case in which the libellee has not filed appearance within the time limited should be transferred to the probate court of the county where such case was entered. By chapter 532 of the Acts of 1922 the probate court was given concurrent jurisdiction with the superior court to hear libels for divorce and to determine the same in a similar manner. This Act took effect on *October 1, 1922.*

**Applications for Divorce.** — The courts granted about 3 petitions out of every 4 filed. This proportion fluctuated considerably during the period 1900 to 1925, the highest proportion of applications being granted in 1924 (89.5 per cent), and the lowest proportion in 1906 (67.1 per cent). During this entire period 81.5 per cent of all applications were granted, .9 per cent were refused, and 17.6 per cent were dismissed.

**Contested Cases.** — Of the total number of applications for divorces during the twenty-six years from 1900 to 1925, only 11.6 per cent were contested. In 1925 of the 3,887 applications for divorce, only 923, or 23.7 per cent were contested, and of the 3,395 divorces granted, 679, or 20 per cent were contested. The proportion of contested cases is larger for divorces granted to the wife (20.5 per cent) than for those granted to the husband (18.6 per cent).

**Number of Divorces.** — Divorces granted in 1925 numbered 3,395, a decrease of 450, or 11.7 per cent less than the number granted in 1924, and a decrease of 238, or 6.6 per cent less than the average number granted for the five-year period 1920 to 1924.

**Divorce Rates.** — The number of divorces granted per 100,000 population was 81.9, as compared with 96.1 in 1924, 90.5 in 1923, 83.3 in 1922, 97.9 in 1921, and 94.7 in 1920.

Divorce rates based on the married population, i.e., the number of divorces per 100,000 married population, are more significant than rates based upon the total population, because of the elimination of possible variations in the proportion married, and because of the fact that divorce can arise only among the married. Rates calculated in this manner are shown in Table 58, page 159, for the census years 1900 to 1920. In this table the number of divorces shown for the census years 1900 to 1920 is not the actual number in that year, but the annual average for the five-year period of which the census year is the median. This method eliminates any peculiarities in the census year which may have affected divorce, and makes the figures more typical of the period as a whole.

**Party to Which Granted.** — Over two-thirds (71.8 per cent) of the total number of divorces in the period 1900 to 1925 were granted to the wife. In other words divorces obtained by the wife are more than twice as numerous as those obtained by the husband. This difference may be partially explained by the fact that without any reference to the question of which party is the more frequently responsible for the marital unhappiness, the wife has tangible ground for divorce more frequently than the husband, because certain well known and comparatively common grounds are more readily applicable against the husband than against the wife. For example, cruelty, in so far as it is physical cruelty, is not ordinarily an available ground for a husband, although men are sometimes granted divorces on this ground.

The proportion of divorces granted to the wife fluctuated between 73.8 per cent in 1905 and 68.3 in 1902, as compared with 71.8 per cent for the entire period of 1900 to 1925.

**Divorces Classified by Causes, 1900 to 1925.** — The statistics concerning the cause of divorce deal with the legal cause as ascertained from the court records. It should be borne in mind, however, that the cause for which a divorce is granted by the courts is not necessarily the underlying reason for the marital unhappiness, and that the value of statistics of divorce as an index to the actual causes is as a consequence impaired.

Divorces granted on the ground of desertion have increased threefold in the twenty-six year period 1900 to 1925, while the increase in the number of divorces granted for adultery has been very slight.

The most common ground on which divorce was granted by the courts was desertion, which accounted for 47.9 per cent of all the divorces granted in the period 1900 to 1925, for 64.7 per cent of all those granted to the husband in this period, and for 41.3 per cent of those granted to the wife.

The number and per cent of divorces granted for all causes, to the husband and to the wife, for the twenty-six year period 1900 to 1925, are shown in Table 60, page 160.

**Annulment Classified as Divorce.** — Among the less important classes of causes appears the term "nullity of marriage." In 482 cases, or .8 per cent of the total number of divorces granted during the period 1900 to 1925, there was some cause shown which may have existed at the time of marriage. These cases form but a small proportion of all cases considered, and do not affect the results to any material degree.

**Duration of Marriages.** — The average number of years libellants were married at the time of application for divorce has fluctuated between 10.4 years in 1923 and 11.4 years in 1903. The average number of years the libellants were married in 1925 was 10.7. Ten and four-tenths years in 1923 was the lowest average since 1900.

Of the total libellants in Massachusetts for whom the number of years married was reported in 1925, 57 per cent made application for divorce before they had been married ten years, as compared with 55.7 per cent in 1924, 56.3 in 1923, 54 in 1922, 54.4 in 1921, and 52.9 for the twenty-six year period 1900 to 1925.

<sup>1</sup> Eight hundred sixty-six libels were received from the Superior Court; three thousand forty from the Probate Court. Three libels each from Bristol and Middlesex, two from Suffolk and one from Hampden counties transferred to other counties. Four libels discontinued. Two decrees revoked. Two petitions to affirm marriage. One petition to vacate decree. One petition for custody of minor child.

PART II. D.  
POPULATION STATISTICS

Introductory	PAGE
Estimated population	163
Statistical tables	163
	164-167

**Introductory.** — All vital statistics are based upon the population. The number of births, marriages, divorces and deaths is expressed in relation to the population, usually as rates giving the number occurring during the calendar year per 1,000 inhabitants or group of inhabitants, such as age groups, sex, nativity, race, marital condition, and occupation groups.

Information regarding population is obtained by a census enumeration, and in Massachusetts these enumerations are made every five years. The statistics for 1925 in this report are based on the State census taken as of March 31, 1925.

It is unfortunate for statistical purposes that this census did not enumerate the population by sex and age groups. The lack of this information is particularly noticed in the mortality tables numbered 5 and 6.

The population of any community or State is continually changing, in most cases increasing, and for this reason it becomes necessary to make estimates of the population for the periods between the census enumerations upon which to base rates for the various vital events, and especially for the accurate computation and expression of birth, marriage, divorce, and death rates. Such estimates are necessary for all dates except those on which the census enumerations are made, and are in all cases preferable to a repetition of the census returns for a certain year.

For non-census years the statistical tables in this book are based upon the estimated population as determined by the arithmetical method, which assumes a constant amount of increase between the census years.

The unexpected result of the national census of 1920, in which the State of Massachusetts shows a gain in population of only 159,046 in the five-year period 1916 to 1920, has made the estimated population for the years 1916, 1917, and 1918 based on the censuses of the years 1910 and 1915 appear almost absurd. In fact, the 1918 statistics on births, marriages, divorces, and deaths were based on a higher estimated population (3,907,576) than the estimated population for 1919 (3,835,614) obtained from the censuses of 1915 and 1920.

**Estimated Population.** — The method of calculating estimates of population for the intercensal years is shown in the following example: —

Massachusetts had a population of 3,852,356 at the Federal census of 1920 (January 1), and of 3,693,310 at the State census of 1915 (April 1). The increase during the intercensal period (57 months) was 159,046, and the monthly increase, according to the arithmetical method of estimating population, was —

$$\frac{3,852,356 - 3,693,310}{57} = 2,790$$

The same annual increase is also assumed to occur until the next census shall have been taken.

The census population for each municipality in the Commonwealth for the years 1910, 1915 and 1920 is shown in the Annual Report on Births, Marriages, and Deaths, 1920, pages 216 to 221.

## APPENDIX

### INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH

#### 1. DETAILED INTERNATIONAL LIST

#### 2. ABRIDGED INTERNATIONAL LIST

## INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH.<sup>1</sup>

There are two separate and distinct classifications of causes of death embodied in the International List of Causes of Death: these are the detailed and abridged International Lists. The former, as indicated by its name, presents causes of death in greater detail than does the latter; that is, it shows separately certain diseases which in the abridged list are grouped together for presentation. The majority of the titles of the abridged list are therefore consolidations of certain titles of the detailed list. The shorter list is used as a basis for certain tables in this volume for which it is either unnecessary or impracticable to present data for each disease and cause of death shown in the detailed list.

The distinction between these lists should always be considered when using the tables of these reports. There are several cases in which the title headings in the two lists are identical, but the causes included are widely at variance. As an example of this the title "Other epidemic diseases" of the detailed list (title No. 25) includes only such epidemic maladies as are not classified separately in titles 1 to 24 of that list; but "Other epidemic diseases" of the abridged list includes titles 3, 4, 12, 13, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25 and 42 of the detailed list. These identical expressions, it will be noted, have two different and distinct meanings.

An asterisk (\*) denotes that, in the opinion of the committee appointed by the Section on Vital Statistics of the American Public Health Association, the titles are acceptable statements of causes of death without autopsy.

The following table shows each title of the Detailed International List: —

### 1. DETAILED INTERNATIONAL LIST.

I. EPIDEMIC, ENDEMIC AND INFECTIOUS DISEASES.	I. EPIDEMIC, ENDEMIC AND INFECTIOUS DISEASES — <i>Con.</i>
1. Typhoid and paratyphoid fever.* (a) Typhoid fever. (b) Paratyphoid fever.	13. Mumps.
2. Typhus fever.*	14. Asiatic cholera.*
3. Relapsing fever ( <i>spirillum obermeieri</i> ). <sup>2</sup>	15. Cholera nostras.
4. Malta fever.	16. Dysentery. <sup>4</sup> (a) Amebic. (b) Bacillary. (c) Unspecified or due to other causes.
5. Malaria. <sup>3</sup>	17. Plague.* (a) Bubonic. (b) Pneumonic. (c) Septicemic. (d) Unspecified.
6. Smallpox.*	18. Yellow fever.*
7. Measles.*	19. Spirochetal hemorrhagic jaundice.
8. Scarlet fever.*	20. Leprosy.*
9. Whooping cough.*	21. Erysipelas.*
10. Diphtheria.*	
11. Influenza. (a) With pulmonary complications specified. (b) Without pulmonary complications specified.	
12. Miliary fever.	

<sup>1</sup> This second decennial revision of the International Classification of Causes of Death was made at Paris July 1 to 3, 1909. The next revision was also made at Paris, Oct. 11 to 14, 1920, and is used beginning with 1921. The causes of death as given in the third revision number 205, compared with 179 in the first, and 189 in the second classification.

<sup>2</sup> This statement is a reliable one, without autopsy, only when the statement of the cause of death is accompanied or supported by a record of the finding of the etiological factor, that is, the *Spirillum* (*Spirochaeta*) *obermeieri*, before death.

<sup>3</sup> Not a reliable statement of cause of death without the supporting statement that the etiological factor, the *plasmodium malariae*, was found in the blood before death or an autopsy.

<sup>4</sup> Not a reliable statement of cause of death unless the specific cause of infection has been identified.

DETAILED INTERNATIONAL LIST — *Continued.*I. EPIDEMIC, ENDEMIC AND INFECTIOUS DISEASES — *Con.*

22. Acute poliomyelitis.\*
23. Lethargic encephalitis.
24. Meningococcus meningitis.
25. Other epidemic and endemic diseases.
  - (a) Chicken-pox.
  - (b) German measles.
  - (c) Others under this title.
26. Glanders.<sup>1</sup>
27. Anthrax.<sup>2</sup>
28. Rabies.<sup>3</sup>
29. Tetanus.<sup>4</sup>
30. Mycoses.<sup>5</sup>
31. Tuberculosis of the respiratory system.\*
32. Tuberculosis of the meninges and central nervous system.<sup>6</sup>
33. Tuberculosis of the intestines and peritoneum.<sup>7</sup>
34. Tuberculosis of the vertebral column.\*
35. Tuberculosis of the joints.\*
36. Tuberculosis of other organs.<sup>8</sup>
  - (a) Tuberculosis of the skin and subcutaneous cellular tissue.
  - (b) Tuberculosis of the bones (vertebral column excepted.)
  - (c) Tuberculosis of the lymphatic system (mesenteric and retroperitoneal glands excepted.)
  - (d) Tuberculosis of the genito-urinary system.
  - (e) Tuberculosis of organs other than the above.
37. Disseminated tuberculosis.\*
  - (a) Acute.
  - (b) Chronic.
38. Syphilis.<sup>9</sup>
39. Soft chancre.
40. Gonococcus infection.<sup>10</sup>
41. Purulent infection, septicemia.
42. Other infectious diseases.

## II. GENERAL DISEASES NOT INCLUDED ABOVE.

43. Cancer and other malignant tumors of the buccal cavity.\*
44. Cancer and other malignant tumors of the stomach and liver.<sup>11</sup>
45. Cancer and other malignant tumors of the peritoneum, intestines and rectum.<sup>11</sup>
46. Cancer and other malignant tumors of the female genital organs.<sup>11</sup>
47. Cancer and other malignant tumors of the breast.\*
48. Cancer and other malignant tumors of the skin.\*

II. GENERAL DISEASES NOT INCLUDED ABOVE — *Con.*

49. Cancer and other malignant tumors of other or unspecified organs.<sup>11</sup>
50. Benign tumors and tumors not returned as malignant (tumors of the female genital organs excepted).<sup>12</sup>
51. Acute rheumatic fever.\*
52. Chronic rheumatism, osteoarthritis, gout.
53. Scurvy.\*
54. Pellagra.\*
55. Beriberi.\*
56. Rickets.\*
57. Diabetes mellitus.\*
58. Anemia chlorosis.<sup>13</sup>
  - (a) Pernicious anemia.
  - (b) Other anemias and chlorosis.
59. Diseases of the pituitary gland.
60. Diseases of the thyroid gland.
  - (a) Exophthalmic goiter.
  - (b) Other diseases of the thyroid gland.
61. Diseases of the parathyroid glands.
62. Diseases of the thymus gland.
63. Diseases of the adrenals (Addison's disease).\*
64. Diseases of the spleen.
65. Leukemia and Hodgkin's disease.<sup>13</sup>
  - (a) Leukemia.
  - (b) Hodgkin's disease.
66. Alcoholism (acute or chronic).\*
67. Chronic poisoning by mineral substances.
  - (a) Chronic lead poisoning.<sup>14</sup>
  - (b) Others under this title.<sup>15</sup>
68. Chronic poisoning by organic substances.<sup>16</sup>
69. Other general diseases.

## III. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.

70. Encephalitis.
71. Meningitis (does not include meningitis specified as meningococcic, tuberculous, rheumatic, etc.).
  - (a) Simple meningitis.
  - (b) Non-epidemic cerebrospinal meningitis.
72. Tabes dorsalis (locomotor ataxia).\*
73. Other diseases of the spinal cord.
74. Cerebral hemorrhage, apoplexy.
  - (a) Cerebral hemorrhage.
  - (b) Cerebral thrombosis and embolism.
75. Paralysis without specified cause.
  - (a) Hemiplegia.
  - (b) Others under this title.
76. General paralysis of the insane.\*

<sup>1</sup> Not a reliable statement of cause of death, without autopsy, unless there is an accompanying record of the finding of the etiological factor; *i.e.*, the *bacillus mallei*.

<sup>2</sup> Not a reliable statement of cause of death, without autopsy, or without determination of the etiological factor; *i.e.*, the *bacillus anthracis*.

<sup>3</sup> Not a reliable statement of cause of death unless verified by autopsy, or proof that the infecting bite was by a proved rabid animal.

<sup>4</sup> A reliable statement of cause of death, without autopsy, when it is accompanied by information as to date, site, nature, and means of injury.

<sup>5</sup> A reliable statement of cause of death, without autopsy, *only* when lesion is accessible to direct examination, or the etiological factor has been identified in the discharges before death.

<sup>6</sup> A reliable statement of cause of death, without autopsy, for children under 10 years of age, but not for decedents of older groups, unless there is confirmatory bacteriological proof of the presence of the tubercle bacillus in the spinal fluid.

<sup>7</sup> An unreliable statement of cause of death, without autopsy, unless proof of an abdominal operation or recovery of tubercle bacillus from the abdominal fluid is presented.

<sup>8</sup> Statements of cause of death which relate to organs or parts of the body which are accessible to direct vision are reliable without autopsy.

<sup>9</sup> Not reliable as a statement of cause of death, without autopsy, unless diagnosis was based on lesions superficially situated or visible through body orifices, or confirmed by unquestioned specific test. A statement of the site, extent, and character of the lesion should be given.

<sup>10</sup> An unreliable statement of cause of death, without autopsy, unless a gonococcic lesion has been demonstrated by the recovery of the gonococcus from the site of the lesion, or by a specific serum reaction, and unless the lesion was an adequate cause of death.

<sup>11</sup> An unreliable statement of cause of death, without autopsy, unless an operation was performed or the neoplasm was otherwise visible or accessible for direct observation.

<sup>12</sup> An unreliable statement of cause of death, without autopsy, unless an operation was performed.

<sup>13</sup> Not a reliable statement of cause of death unless verified by confirmatory blood examination.

<sup>14</sup> A reliable statement of cause of death, without autopsy, *if* there appears a statement of an occupation in which decedent would be subject to lead poisoning, or if the source of the poisoning is specified and complications accompanying, sufficient to cause death, are described.

<sup>15</sup> A reliable statement of cause of death, without autopsy, *only* in cases where the occupation or source of poison is specified and it is indicated that the poison was absorbed as a result of occupation; or the characteristic lesions are superficially located or accessible to direct inspection; or there is chemical or microscopic proof of the presence of poison within the body.

<sup>16</sup> A reliable statement of cause of death, without autopsy, *only* when the source of the poison is specified, or when there is chemical or microscopic proof of the presence of the poison within the body.

DETAILED INTERNATIONAL LIST — *Continued.*III. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE — *Con.*

77. Other forms of mental alienation.
78. Epilepsy.<sup>1</sup>
79. Convulsions (non-puerperal) five years and over.
80. Infantile convulsions (under five years of age).
81. Chorea.\*
82. Neuralgia and neuritis.
83. Softening of the brain.
84. Other diseases of the nervous system.
85. Diseases of the eye and annexe.\*
86. Diseases of the ear and of the mastoid process.\*
  - (a) Diseases of the ear.\*
  - (b) Diseases of the mastoid process.\*

## IV. DISEASES OF THE CIRCULATORY SYSTEM.

87. Pericarditis.<sup>2</sup>
88. Endocarditis and myocarditis (acute).\*
89. Angina pectoris.\*
90. Other diseases of the heart.\*
91. Diseases of the arteries.
  - (a) Aneurysm.
  - (b) Arteriosclerosis.
  - (c) Other diseases of the arteries.
92. Embolism and thrombosis (not cerebral).\*
93. Diseases of the veins (varices, hemorrhoids, phlebitis, etc.).<sup>3</sup>
94. Diseases of the lymphatic system (lymphangitis, etc.).\*
95. Hemorrhage without specified cause.\*
96. Other diseases of the circulatory system.\*

## V. DISEASES OF THE RESPIRATORY SYSTEM.

97. Diseases of the nasal fossæ and their annexe.\*
  - (a) Diseases of the nasal fossæ.
  - (b) Others under this title.
98. Diseases of the larynx.\*
99. Bronchitis.
  - (a) Acute.
  - (b) Chronic.\*
  - (c) Not otherwise defined (under five years of age).
  - (d) Not otherwise defined (five years and over).
100. Bronchopneumonia (including capillary bronchitis).\*
  - (a) Bronchopneumonia.\*
  - (b) Capillary bronchitis.\*
101. Pneumonia.
  - (a) Lobar.
  - (b) Not otherwise defined.
102. Pleurisy.\*
103. Congestion and hemorrhagic infarct of the lung.<sup>4</sup>
104. Gangrene of the lung.\*
105. Asthma.
106. Pulmonary emphysema.\*
107. Other diseases of the respiratory system (tuberculosis excepted).
  - (a) Chronic interstitial pneumonia, including occupational diseases of the lung.
  - (b) Diseases of the mediastinum.
  - (c) Others under this title.\*

## VI. DISEASES OF THE DIGESTIVE SYSTEM.

108. Diseases of the mouth and annexe.\*
109. Diseases of the pharynx and tonsils (including adenoid vegetations).\*
  - (a) Adenoid vegetations.\*
  - (b) Others under this title.\*
110. Diseases of the esophagus.\*
111. Ulcer of the stomach and duodenum.
  - (a) Ulcer of the stomach.
  - (b) Ulcer of the duodenum.
112. Other diseases of the stomach (cancer excepted).
113. Diarrhea and enteritis (under two years of age).\*
114. Diarrhea and enteritis (two years and over).
115. Ankylostomiasis.<sup>5</sup>
116. Diseases due to other intestinal parasites.<sup>6</sup>
  - (a) Cestodes (hydatids of the liver excepted).
  - (b) Trematodes.
  - (c) Nematodes (other than ankylostoma).
  - (d) Coccidia.
  - (e) Other parasites specified.
  - (f) Parasites not specified.
117. Appendicitis and typhlitis.
118. Hernia, intestinal obstruction.
  - (a) Hernia.<sup>7</sup>
  - (b) Intestinal obstruction.<sup>8</sup>
119. Other diseases of the intestines.
120. Acute yellow atrophy of the liver.\*
121. Hydatid tumor of the liver.
122. Cirrhosis of the liver.\*
  - (a) Specified as alcoholic.
  - (b) Not specified as alcoholic.
123. Biliary calculi.\*
124. Other diseases of the liver.
125. Diseases of the pancreas.
126. Peritonitis without specified cause.
127. Other diseases of the digestive system (cancer and tuberculosis excepted).

## VII. NON-VENEREAL DISEASES OF THE GENITO-URINARY SYSTEM AND ANNEXA.

128. Acute nephritis (including unspecified under ten years of age).
129. Chronic nephritis (including unspecified ten years and over).\*
130. Chyluria.\*
131. Other diseases of the kidneys and annexe (diseases of the kidneys in pregnancy excepted).
132. Calculi of the urinary passages.\*
133. Diseases of the bladder.\*
134. Diseases of the urethra, urinary abscess, etc.\*
  - (a) Stricture of the urethra.
  - (b) Others under this title.
135. Diseases of the prostate.\*
136. Non-venerereal diseases of the male genital organs.\*
137. Cysts and other benign tumors of the ovary.
138. Salpingitis and pelvic abscess.
139. Benign tumors of the uterus.\*
140. Non-puerperal uterine hemorrhage.
141. Other diseases of the female genital organs.\*
142. Non-puerperal diseases of the breast (cancer excepted).\*

<sup>1</sup> An unreliable statement of cause of death without autopsy, unless death occurred in an epileptic attack and was witnessed, and there was a previous history of epilepsy.

<sup>2</sup> An unreliable statement of cause of death, without autopsy, unless accompanied by a statement of primary cause or of the character of exudate obtained by paracentesis.

<sup>3</sup> A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site of the lesion or name of the vessel or vessels involved.

<sup>4</sup> Pulmonary congestion is considered a reliable statement of cause of death, without autopsy, only when the cause is specified; as, for example, *accidental inhalation of irritating fumes*, or accompanying lesions which are known to lead to congestion of the lungs.

<sup>5</sup> A reliable statement of cause of death, without autopsy, *provided* the infectious parasite *ankylostoma duodenale* or its ova have been demonstrated.

<sup>6</sup> A reliable statement of cause of death, without autopsy, *only* with the demonstration of the parasite or its ova in the tissues or discharges.

<sup>7</sup> A reliable statement of cause of death if the hernia is external, or is exposed on operation or autopsy, when internal; also, when conditions adequate to cause of death, together with type and location of hernia, are specified.

<sup>8</sup> An unreliable statement of cause of death unless the obstruction is demonstrated on autopsy or operation, or is accessible by examination through the body orifices.

DETAILED INTERNATIONAL LIST — *Concluded.*

## VIII. THE PUERPERAL STATE.

143. Accidents of pregnancy.\*
  - (a) Abortion.
  - (b) Ectopic gestation.
  - (c) Others under this title.
144. Puerperal hemorrhage.\*
145. Other accidents of labor.\*
  - (a) Cesarean section.
  - (b) Other surgical operations and instrumental delivery.
  - (c) Others under this title.
146. Puerperal septicemia.\*
147. Puerperal phlegmasia alba dolens, embolus, sudden death.\*
148. Puerperal albuminuria and convulsions.\*
149. Following childbirth (not otherwise defined).\*
150. Puerperal diseases of the breast.\*

## IX. DISEASES OF THE SKIN AND OF THE CELLULAR TISSUE.

151. Gangrene.<sup>1</sup>
152. Furuncle.<sup>1</sup>
153. Acute abscess.<sup>1</sup>
154. Other diseases of the skin and annexa.\*

## X. DISEASES OF THE BONES AND OF THE ORGANS OF LOCOMOTION.

155. Diseases of the bones (tuberculosis excepted).\*
156. Diseases of the joints (tuberculosis and rheumatism excepted).\*
157. Amputations.
158. Other diseases of the organs of locomotion.

## XI. MALFORMATIONS.

159. Congenital malformations (stillbirths not included).\*
  - (a) Hydrocephalus.\*
  - (b) Congenital malformations of the heart.\*
  - (c) Others under this title.\*

## XII. EARLY INFANCY.

160. Congenital debility, icterus, and sclerema.
161. Premature birth; injury at birth.
  - (a) Premature birth.\*
  - (b) Injury at birth.\*
162. Other diseases peculiar to early infancy.
163. Lack of care.\*

## XIII. OLD AGE.

164. Senility.

## XIV. EXTERNAL CAUSES.

165. Suicide by solid or liquid poisons (corrosive substances excepted).<sup>2</sup>
166. Suicide by corrosive substances.\*
167. Suicide by poisonous gas.<sup>3</sup>
168. Suicide by hanging or strangulation.\*

XIV. EXTERNAL CAUSES — *Con.*

169. Suicide by drowning.\*
170. Suicide by firearms.\*
171. Suicide by cutting or piercing instruments.\*
172. Suicide by jumping from high places.\*
173. Suicide by crushing.\*
174. Other suicides.\*
175. Poisoning by food.<sup>4</sup>
176. Poisoning by venomous animals.\*
177. Other acute accidental poisonings (gas excepted).
178. Conflagration.\*
179. Accidental burns (conflagration excepted).\*
180. Accidental mechanical suffocation.\*
181. Accidental absorption of irrespirable or poisonous gas.\*
182. Accidental drowning.\*
183. Accidental traumatism by firearms (wounds of war excepted).<sup>5</sup>
184. Accidental traumatism by cutting or piercing instruments.<sup>5</sup>
185. Accidental traumatism by fall.\*
186. Accidental traumatism in mines and quarries.\*
  - (a) Mines.\*
  - (b) Quarries.\*
187. Accidental traumatism by machines.\*
188. Accidental traumatism by other crushing (vehicles, railways, landslides, etc.).
  - (a) Railroad accidents.\*
  - (b) Street car accidents.\*
  - (c) Automobile accidents.\*
  - (d) Aeroplane and balloon accidents.\*
  - (e) Motorcycle accidents.\*
  - (f) Injuries by other vehicles.\*
  - (g) Landslide, other crushing.
189. Injuries by animals (not poisoning).\*
190. Wounds of war.
191. Execution of civilians by belligerent armies.
192. Starvation (deprivation of food or water).\*
193. Excessive cold.\*
194. Excessive heat.\*
195. Lightning.\*
196. Other accidental electric shocks.\*
197. Homicide by firearms.\*
198. Homicide by cutting or piercing instruments.\*
199. Homicide by other means.\*
200. Infanticide (murder of infants less than one year of age).\*
201. Fracture (cause not specified).
202. Other external violence (cause specified).
203. Other external violence (cause not specified).

## XV. ILL-DEFINED DISEASES.

204. Sudden death.
205. Cause of death not specified or ill-defined.
  - (a) Ill-defined.
  - (b) Not specified or unknown.

<sup>1</sup> A reliable statement of cause of death, without autopsy, if there is an accompanying statement of the site and nature of the original infection.

<sup>2</sup> A reliable statement of cause of death, without autopsy, if the character of the solid or liquid is specified.

<sup>3</sup> A reliable statement of cause of death, without autopsy, if the character of the gas is specified.

<sup>4</sup> An unreliable statement of cause of death without supporting data as to a group of accompanying cases or the ingestion of the particular poisonous substances.

<sup>5</sup> An unreliable statement of cause of death without supporting data, such as site and extent of injury.

## 2. ABRIDGED INTERNATIONAL LIST.

The following table shows each title of the Abridged International List. The numbers of the titles of the Detailed International List included in each title of the abridged list appear in parentheses.

Abridged  
Int. List  
Number.

## CAUSE OF DEATH.

1. Typhoid fever (1).\*
2. Typhus fever (2).\*
3. Malaria (5).
4. Smallpox (6).\*
5. Measles (7).\*
6. Scarlet fever (8).\*
7. Whooping cough (9).\*
8. Diphtheria and croup (10).\*
9. Influenza (11).
10. Asiatic cholera (14).\*
11. Cholera nostras (15).
12. Other epidemic diseases (3, 4, 12, 13, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 42).
13. Tuberculosis of the lungs (31).
14. Tuberculous meningitis (32).
15. Other forms of tuberculosis (33, 34, 35, 36, 37).
16. Cancer and other malignant tumors (43, 44, 45, 46, 47, 48, 49).
17. Simple meningitis (71*a*).
18. Cerebral hemorrhage and softening (74, 83).
19. Organic diseases of the heart (90).\*
20. Acute bronchitis (99*a*).
21. Chronic bronchitis (99*b*).\*
22. Pneumonia (101).
23. Other diseases of the respiratory system (tuberculosis excepted) (97, 98, 99*c*, 99*d*, 100, 102, 103, 104, 105, 106, 107).
24. Diseases of the stomach (cancer excepted) (111*a*, 112).
25. Diarrhea and enteritis (under 2 years) (113).\*
26. Appendicitis and typhlitis (117).
27. Hernia, intestinal obstruction (118).
28. Cirrhosis of the liver (122).\*
29. Acute nephritis and Bright's disease (128, 129).
30. Noncancerous tumors and other diseases of the female genital organs (137, 138, 139, 140, 141, 142).
31. Puerperal septicemia (puerperal fever, peritonitis) (146).\*
32. Other puerperal accidents of pregnancy and labor (143, 144, 145, 147, 148, 149, 150).\*
33. Congenital debility and malformations (159, 160, 161).
34. Senility (164).
35. Violent deaths (suicide excepted) (175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203).
36. Suicide (165, 166, 167, 168, 169, 170, 171, 172, 173, 174).\*
37. Other diseases (26, 27, 28, 29, 30, 38, 39, 40, 41, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71*b*, 72, 73, 75, 76, 77, 78, 79, 80, 81, 82, 84, 85, 86, 87, 88, 89, 91, 92, 93, 94, 95, 96, 108, 109, 110, 111*b*, 114, 115, 116, 119, 120, 121, 123, 124, 125, 126, 127, 130, 131, 132, 133, 134, 135, 136, 151, 152, 153, 154, 155, 156, 157, 158, 162, 163).
38. Unknown or ill-defined diseases (204, 205).
